If you would know how many years purchase a Lease or Annuity for 14 years is worth after the rate of money at 6 in the hundred, look in the Column on the left hand for 14 the number of years to be purchased; and against that on the right hand, you will find 9 years and 3 months; so that a lease for 14 years is worth 9 years and 1 quarter of a years purchase; for that proportion 3 months bear to 12 months. But if you would know what a Lease for 14 years in being, it worth to be made up 21 years, after the rate of 6 in the hundred; do but subtract 9 years purchase and 1 quarter (the value of 14 years) from 11 years and 3 quarters (the value of 21 years after that rate) and the remainder, being 2 years purchase and an half, is the true value.

But if you would know what it would be worth at the rate of money at 8 or 10 in the hundred, then make use of those Columns under 8 and 10 as you did hat under 6 per Cent.

The

The Use of the three former Tables of Use upon Use, according to the rate of 6 in the Hundred.

For the first, if you would know how much one pound stock amounts to (at Interest upon Interest) in any number of years not exceeding 31, seek the number of years in the first Column towards your left hand under this word Years, and there directly against the same, you shall see the Sum desired.

Example.

Admit it be required to know how much 1 l. stock amounts to at Interest upon Interest in 21 years, look 21 under the word Years, and directly against the same you shall see 3 l. 7s. 11 d. 2 q. which is the Sum desired.

But suppose the Question were to find the increase of 10 l. stock in the same time, multiply the same by 10, or add the same 10 times together, which makes 33 l. 19 s. 7 d. which is also the Sum desired. And thus may you work upon any Sum desired in any of the other Columns, observing the manner as is before, as the Propositions nominated in the head of each Column do direct. And thus much for compound Interest.

ADVERTISEMENT.

The true Essential Spirits of Scurvy-Grass Compound, that most Noble Medicine, so famous throughout the Kingdoms of England, Scotland and Ireland, and other Nations beyond the Seas, for removing all cold Distempers of the Stomach, and especially for it's miraculous Virtue in Curing the Scurvy, are faithfully prepared and sold by Henry Clarke the First and only Author, at his House the Sign of the Lamb near Somerset-House in the Strand: And for the benefit and conveniency of his Country-men they may be had at all the Market Towns almost about England. And you are desired to enquire for Clarke's Compound Spirits, they being the only True Spirits, and the rest but Counterfeits.

The

The Use of the Table of Interest.

Find the Sum of Money in the first Column towards the Left Hand, and the time in the Head of the Table, and in that Column right against the Sum you have the Interest thereof.

EXAMPLE I.

What is the Interest of six Pounds for two-Months.

Seek 6 l. in the first Column, and right against it is 0 l. 1 s. 2 d. 2 q. and so much is the Interest. Also the Interest of 80 l. for 9 months is 3 l. 12 s. And so for any other Sum, when both the just sum and just time may be both found in the Table.

But if you cannot at once find your just sum, or your just time in the Table, you must take it out at several times, and add all together.

EXAMPLE II.

What is the Interest of 237 l. 10 s. for 9 Months.

	l.	s.	d.	q.
The Interest of { 200 l. }	9	0	0	0
{ 20 l. }	1	7	0	0
{ 7 l. }	0	6	3	2

The

The Use of the foregoing Tables for the Gaging of Vessels.

If you would know the quantity that any Vessel containeth either in Wine or Ale Gallons; you must
 1. Take the Diameter at the Head, and also at the Bung in the inside of the Vessel; both of them in inches. 2. Find the number of inches at the Head in the first Column, and the number which standeth against them set down. 3. Find the number of inches at the Bung, and the number that standeth against them set down twice. 4. Add these three numbers together. 5. Multiply the Sum of these three numbers, by the number of inches that the Vessel is long, and from the product cut off three Figures towards the right hand: so shall the Figures towards the left hand be whole Gallons, and the three Figures on the right hand are thousand parts of a Gallon.

Example.

In a Cask whose Diameter at the head is 17 inches at the Bung 26 inches, and in length 42 inches, how many Wine or Ale Gallons is contained therein?

The Breadth of any piece of Land in Perches.

The length of 1 qu. of an Ac. in perches & 100 parts of a perch.

The leng. of half an Ac. in per. & 100 par. of a perch.

The len. of 3 qu. of an Ac. in per. & 100 parts of a perch.

The len. of one Acr. in per. & 100 parts of a perch.

The

The Use of the foregoing Table.

If you would set out any piece of Ground of any quantity of any number of perches in breadth : or by the breadth of a Furlong or Furlongs to know the quantity of an Acre, half, or quarter, or upwards : This Table will readily shew you : but it will be requisite to have a Rod or Pole of 16 feet and a half in length, divided into 10 equal parts, and each of those parts into 10 smaller parts, in all 100 parts by Nails or Notches : and such a rod or pole every Country Gentleman or Farmer ought to have : For by it, and this Table, he may set out or divide any long Close into small parcels, cast up any quantity of ground for mowing, plowing, reaping, or the like ; without the help of a Surveyer. As by Example.

Example, I have a Field, the end whereof is 18 pole or perches long, and I would set out one Acre, how long must the other side of the Acre be ?

Seek 18 pole the breadth of the Field, in the first Column of the Table, towards the left hand, and right against it you shall find, in the first Column 3 22, which is 3 pole, and 22 hundred parts of a pole, to make one quarter of an Acre at that breadth : in the next Column 4 44 for half an Acre, in the next Column 6 66 for three quarters of an Acre : and in the last Column 8 90 which is 8 of your poles length, and 90 of the Divisions : and so long must an Acre be whose breadth is 18 pole.

Also at 6 pole broad

		per.	par.	
1 Quarter	} will be	6	66	} long.
Half		13	33	
3 Quarters		20	00	
One Acre		26	60	

Many other Uses may be made of this Table, which are here omitted for want of Room.
